USE CASE DIAGRAM:

Extend Relationships:

1. Update Medical Record - View Medical Record:
- Explanation: The "Update Medical Record" use case extends the "View Medical Record" use case. This means that, in certain scenarios, viewing medical records may lead to an extension where the doctor or healthcare professional needs to update the medical records. For example, during a telemedicine consultation, the doctor may need to update the patient's medical records based on the discussion.

2. Provide Telemedicine Consultation - Assist in Telemedicine Consultations:
- Explanation: The "Assist in Telemedicine Consultations" use case extends the "Provide Telemedicine Consultation" use case. This extension signifies that there are situations where additional assistance is required during a telemedicine consultation. It could involve a nurse or a specialist supporting the doctor during the telemedicine session.

3. Process Insurance Claims - Report Fraudulent Activities:
- Explanation: The "Report Fraudulent Activities" use case extends the "Process Insurance Claims" use case. This extension is included to handle cases where the insurance provider identifies or suspects fraudulent activities during the process of processing insurance claims. Reporting such activities becomes an additional step in the overall insurance claims processing workflow.

Include Relationships:

1. Receive Prescription Requests - Create Prescription:
- Explanation: "Create Prescription" is included in "Receive Prescription Requests" to emphasize that the act of creating a prescription is an essential part of handling prescription requests. This ensures that every time a prescription request is received, the system must include the step of creating the prescription.

2. Report for Emergency Service - Get Ambulance Service:
- Explanation: "Get Ambulance Service" is included in "Report for Emergency Service" to signify that when there is a report for emergency services, the system must include the process of getting an ambulance service. It ensures that the reporting of an emergency includes the subsequent action of dispatching an ambulance.

3. Dispense Medications - Record Medication Dispensing Information:
- Explanation: "Record Medication Dispensing Information" is included in "Dispense Medications" to indicate that recording information about medication dispensing is an inherent part of the overall process of dispensing medications. This ensures that every time medications are dispensed, the system includes the recording of relevant information.

4. Record Vital Signs - Regular Patient Monitoring:
- Explanation: "Regular Patient Monitoring" includes the activity of "Record Vital Signs" to emphasize that recording vital signs is an integral part of the broader process of regular patient monitoring. It ensures that whenever regular patient monitoring occurs, the system includes the step of recording vital signs.
