ORGANIZATION OF ISLAMIC COOPERATION

SOFTWARE REQUIREMENTS AND SPECIFICATIONS

Name: Antara Arifa Mullick

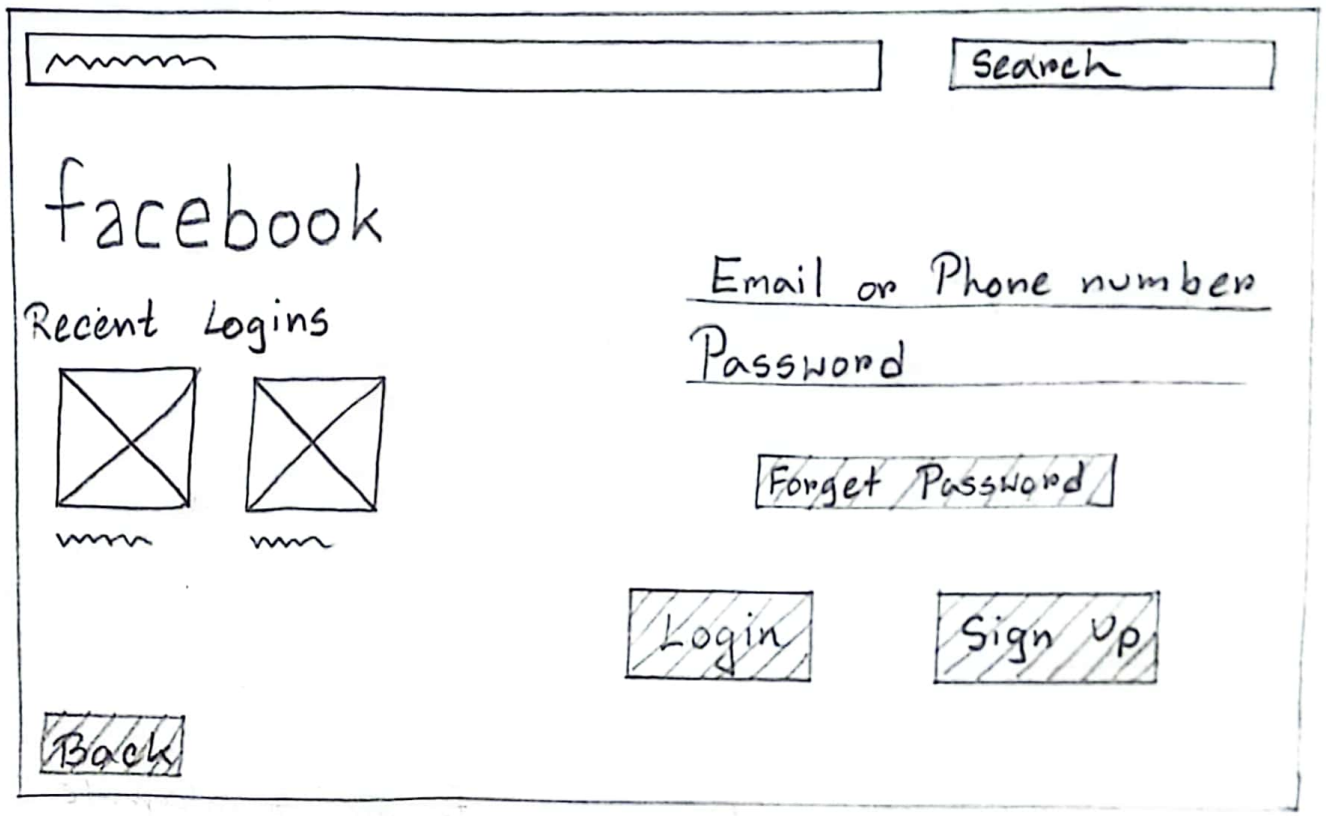

Student ID: 210042132

Semester:4th

Department: Computer Science and Engineering

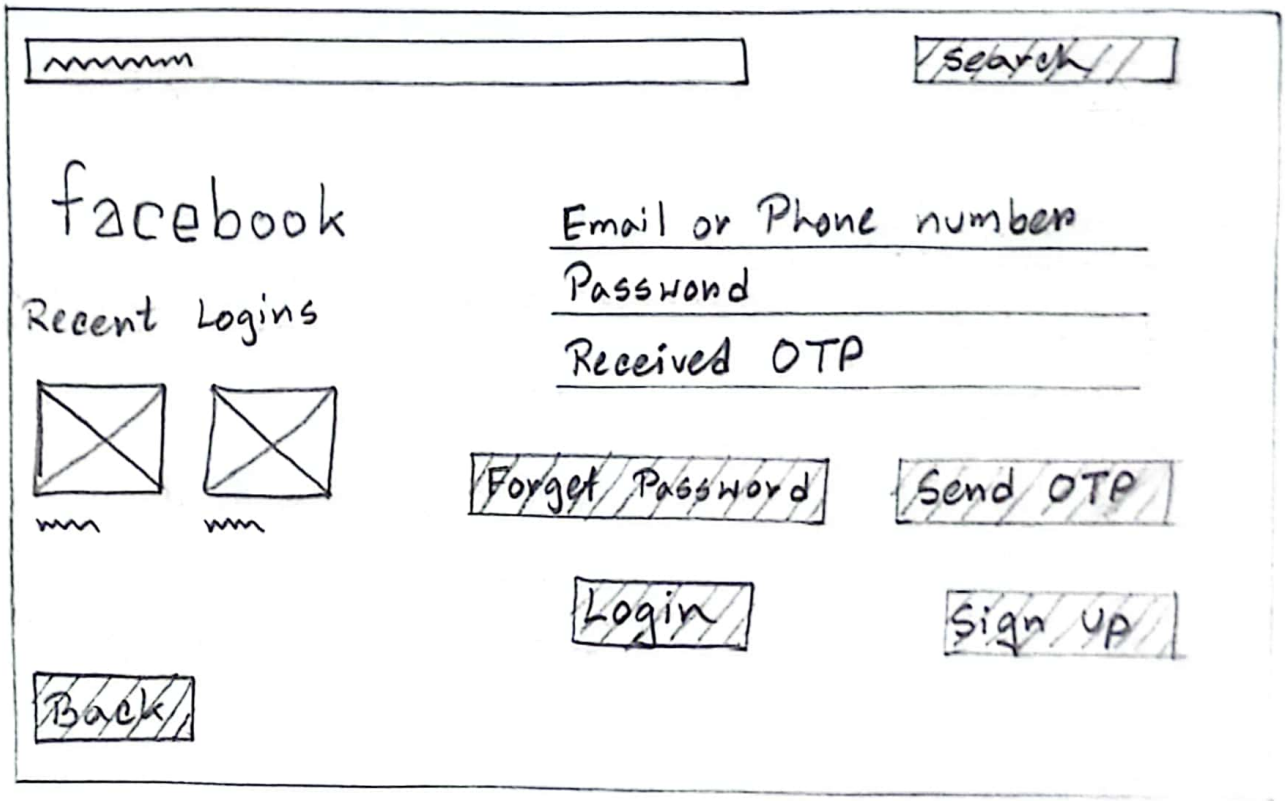

Program: B.Sc. in Software Engineering

Login Page : Concept 1 :

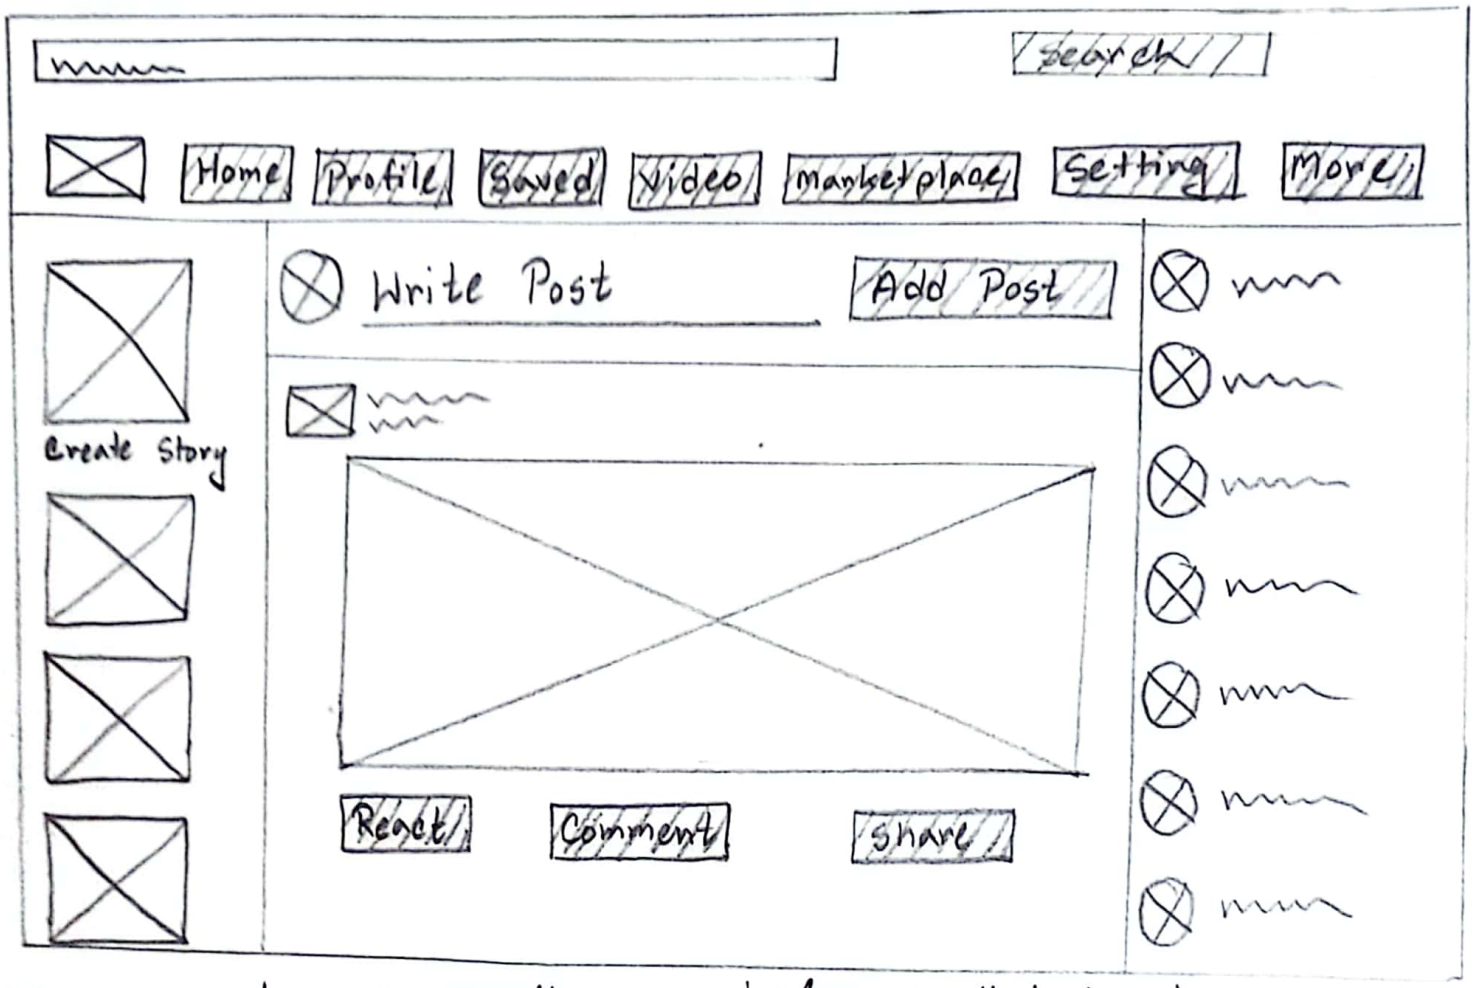

The concept was creating a wireframe with an inviting and secure entry point. The login page that I created has an url bar and search button at top. Then in the left there are recent logins and at the left bottom I have a back button. In the right I have option to use email or phone number for logging in. A person must use password, if he/she forgets then he/she can click forget password button. If someone doesn't have an account he/she can sign up first then log in to facebook

Login Page: Concept 2:

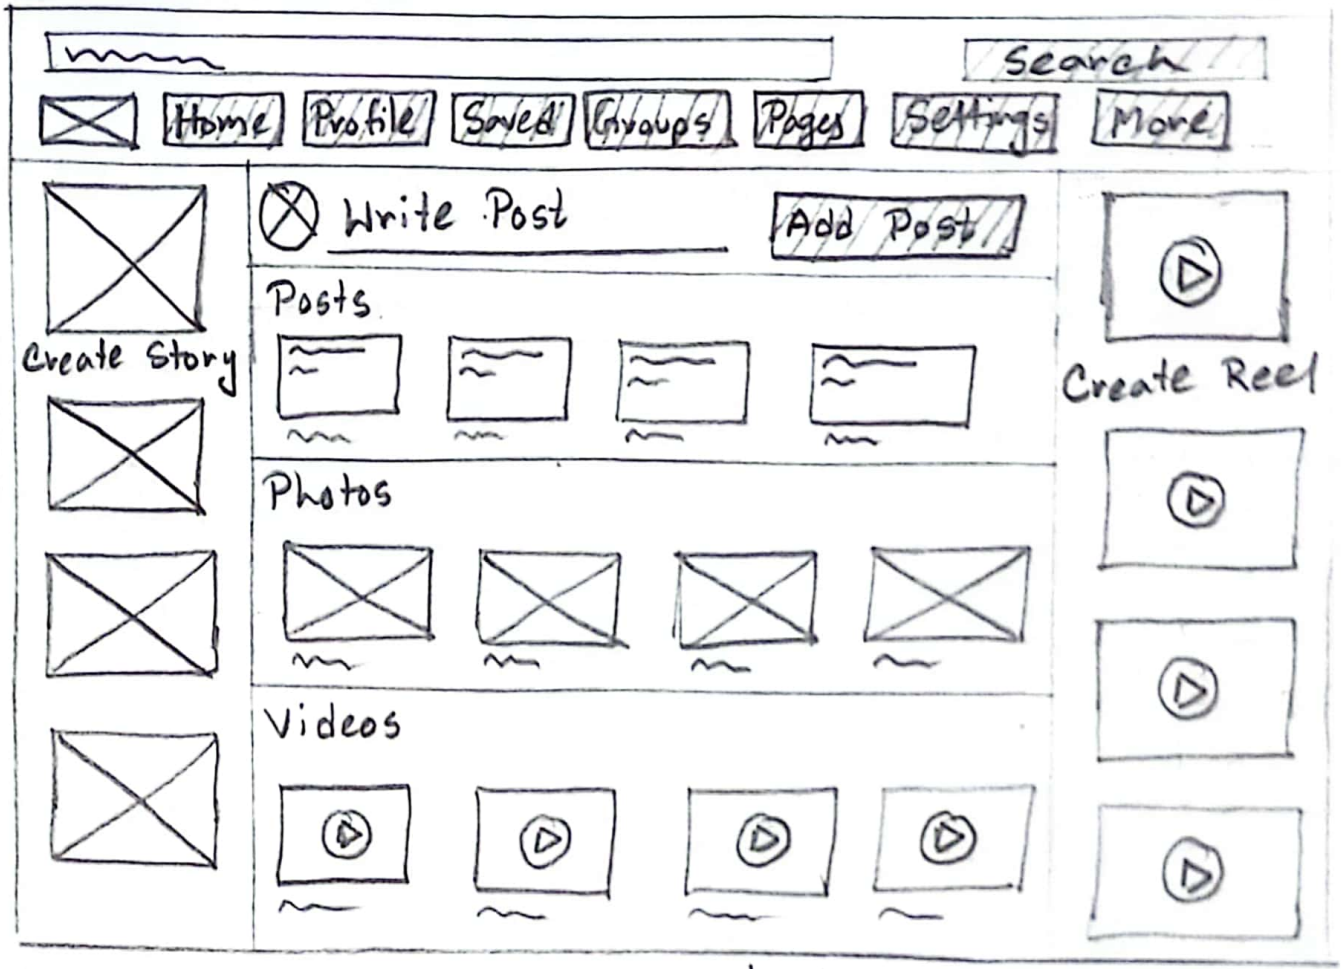

The concept was creating a wireframe to integrate advanced security system. Here, I added a new option for putting the received OTP, that is received by using the send OTP button. This is the feature I added for advanced security. Apart that I have url bar and search button at top and back button at the bottom. In the left side, I have recent logins. In the right side, there are options to put information for login. If someone doesn't have an account he/she can sign up first, then Log in. One can use the forget password button, incase they forget the password used before.

Newsfeed : Concept 1 :

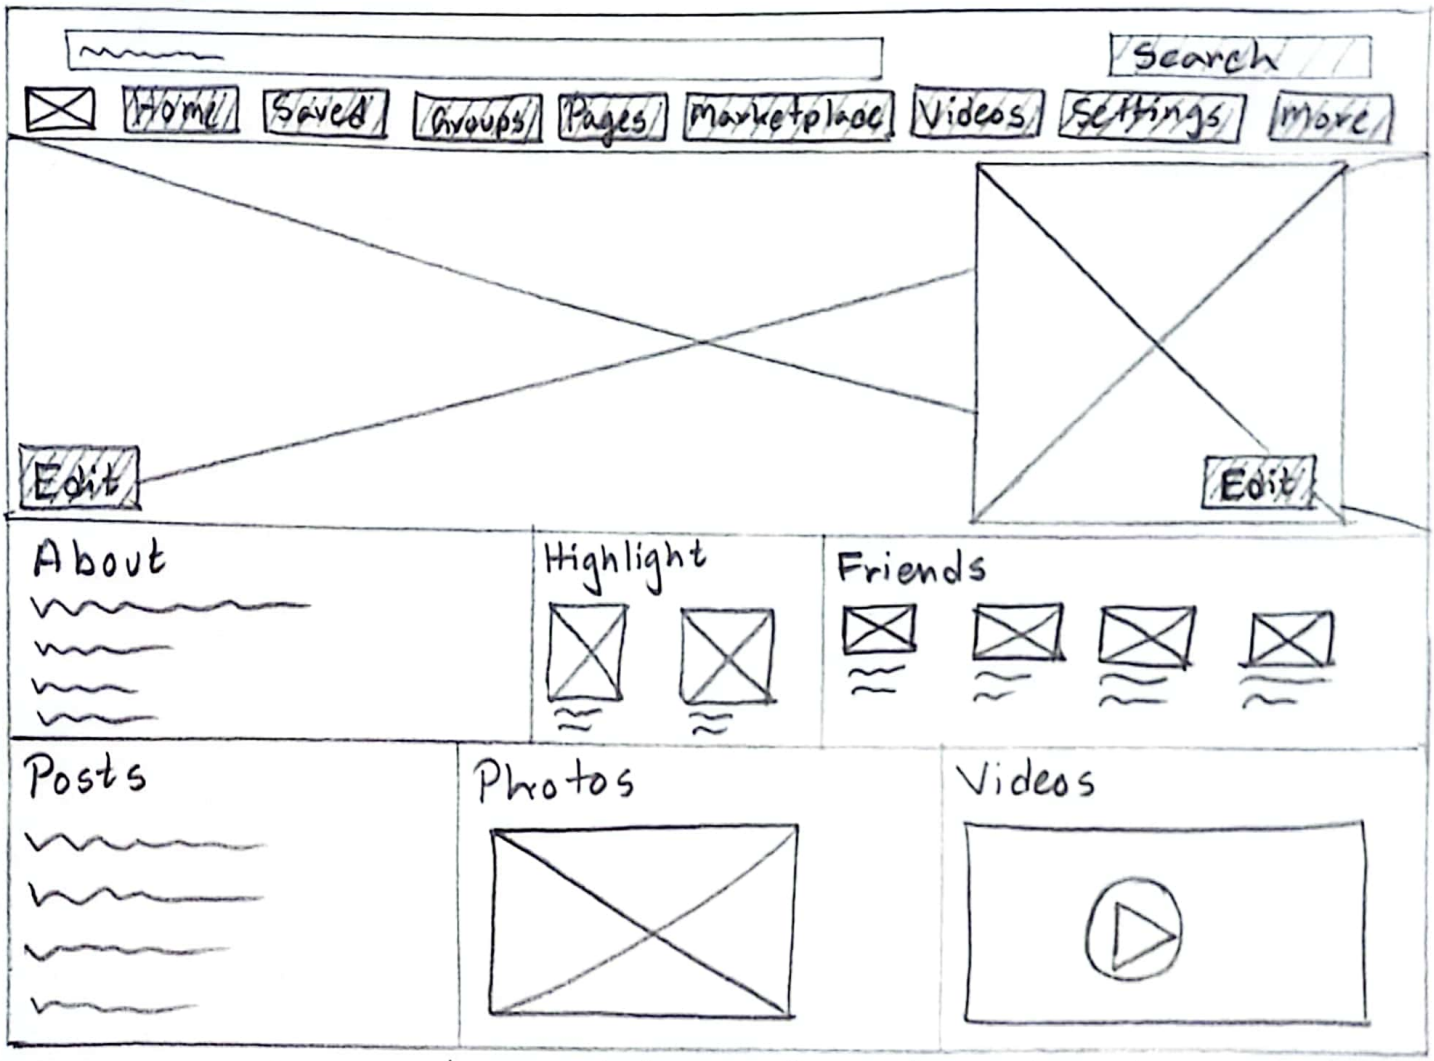

The concept was creating a wireframe that boosts users to discover and interact with contents easily. At the top I added option to search in facebook and a button to search. In the navigation bar I added home, profile, saved, video, marketplace, settings and more button so user can easily discover these. In the left user has option to create story and below that he/she can see stories of friends and in the right there are chatheads to easily interact with people. In the middle we have option for user to write a post and the post. Below that comes the contents of facebook one by one, where user can react, comment and share if he/she wants.

Newsfeed ; Concept 2:

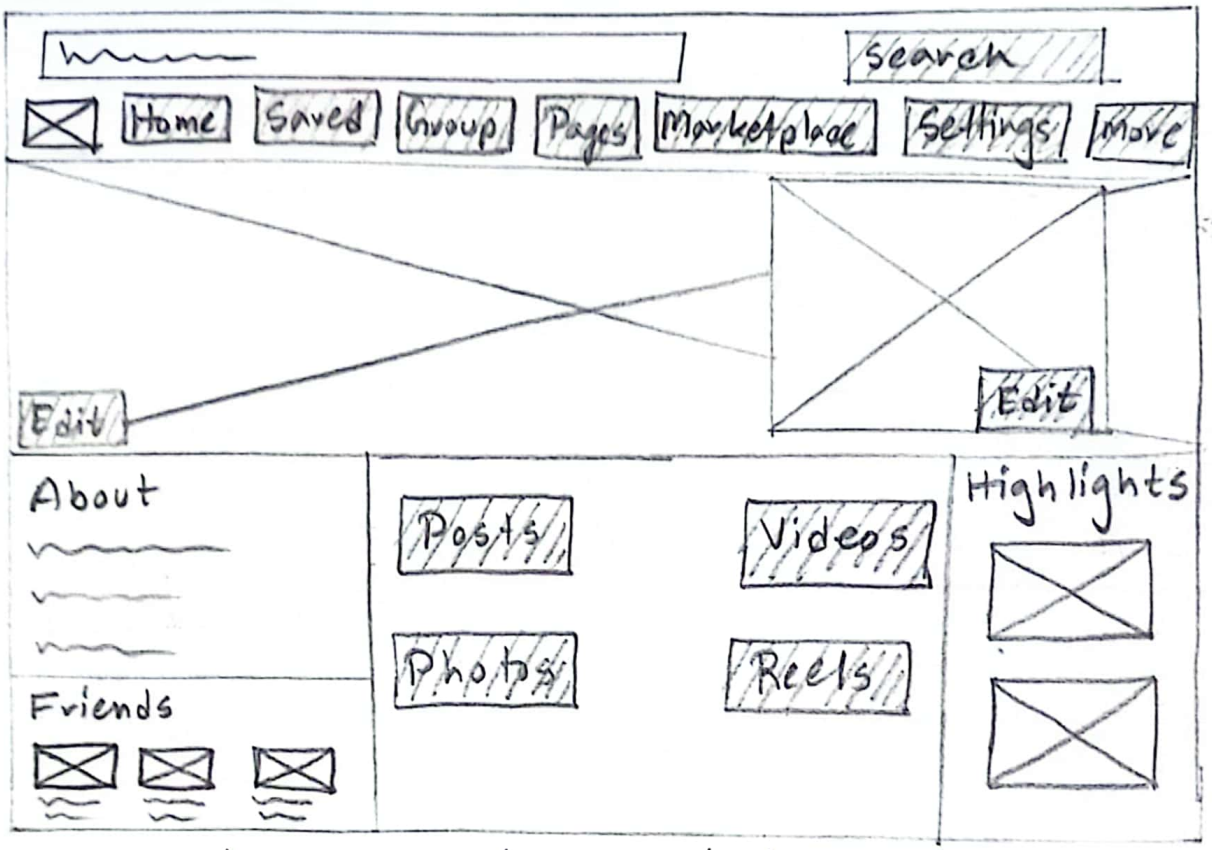

The concept was creating a wireframe that emphasizes a streamlined content presentation. So I added separate sections for all kinds of contents In the left one can create story and see stories of friends below, In the right one can create reels and see reels others made below. In the middle we have separate sections, where users can see posts by sliding to the right. Below that we have photos and then we have videos sections. These work the same way. Beside these, user can search anything and post what he/she wants. He/she can easily use buttons from navigation bar.

Profile Page : Concept 1:

The concept is creating a wireframe showcasing enhanced personalization and activity highlights. On the top we have search and navigation bar. Then we have cover photo with an edit button. In the left of cover photo we have profile photo also with an edit button. Below that we have three separated sections for user's info in about section along with highlights and Friends. Then we have three separated sections for posts, photos and videos. To enhance personalization I created separated sections to highlight activities also.

Profile Page: Concept 2:

The concept was creating a wireframe focused on simplified navigation and content interaction. Here at the top we have search bar and then we have general navigation bar. We have cover photo with edit button and on top right of that we have profile photo with edit button. Then we have About in the left and a section showing friends below that. Highlights are shown on the right. In the middle I added buttons where user can easily navigate through his/her posts, photos, videos and reels.
